Our projects. Practical solutions in action.

Every commercial project brings its own mix of design, access and operating requirements. Explore how we worked with project teams to bring those details together.

What makes a useful project brief?

Let’s talk about your project

Explore the case studies

Project	The challenge	Our approach
Kennards Self Storage, Murarrie	Clean door lines under a high-gloss corporate finish, with reliable storage and loading-area access.	Brake-press curtain technology, colour matching and ATA access-control integration. Case study: April 2019.
The Bend Motorsport Park	83 rolling shutter doors, central operation and tight clearances at the Welcome Centre.	Coordination with the electrical trades and an R2W Traditional Wideline specification to fit the available space. Case study: March 2020.

What makes a useful project brief?

The opening dimensions and available headroom, sideroom and travel space.

The supporting structure and any services close to the door or opener.

How often the opening will be used and the access-control requirements.

The finish, visibility, ventilation and security requirements.

Any site-specific wind or bushfire requirements and the relevant design information.

We use those details to help identify suitable products and supporting documentation. The examples above describe completed projects; a new project needs its own specification.
