Whether you're a new homeowner or thinking of upgrading your existing garage door, our buying guide offers plenty of helpful information on door types, styles and must-have security features to get you started. Explore our range Explore our range Explore our range Types of garage doors All of our B&D; garage doors are Australian-made and available in two types: roller doors and sectional doors. Roller garage doors Sectional garage doors Tilt doors Roller garage doors are a convenient and cost-effective solution for garages, laneways and sheds. Compact enough to still allow use of the ceiling (for lighting or extra storage), roller garage doors roll up like a carpet to the top of the door opening. This allows for cars to be placed right up against the door, saving driveway space. Available to purchase with or without an automatic opener, roller garage doors offer enhanced safety with a sturdy key locking mechanism to prevent unwanted intrusion. They can also be built to withstand high wind conditions, making them ideal for cyclone-prone areas. Sectional garage doors are made up of several panels hinged together to look like one solid door. They can be tailored to fit garage openings of any size and shape. Unlike the roller door, sectional garage doors run on metal tracks along the ceiling when opening and closing. Custom-made to fit the garage in a range of styles and colours, they're a popular choice for residential homes due to their modern street appeal, sturdiness and functionality. Gone are the days of manually lifting and physically unlocking a garage door. Sectional garage doors are almost always purchased with an automatic opener for greater security. Plus, since most garage doors don't lock, B&D;'s automatic locking systems do away with the need for physical locks, providing peace of mind that only people with a remote can gain entry. Tilt doors are the least common garage door due their safety and security issues, which is why B&D; don't manufacture or install them. Tilt doors feature exposed springs on either side of the door and are created from one solid piece instead of hinged panels, making them quite heavy. This can put extra pressure on the springs and balancing system when opening and closing. When the springs wear out, they can break, causing the door to slam down without warning, potentially hitting people, children, pets and cars. Garage door safety and security Security is of utmost importance when installing a new

garage door. At B&D, we're committed to delivering the highest standards of safety to keep our customers out of harm's way. Below is a run-down of the must-have safety features to look for when buying a new garage door.

Smart phone operation Smartphone-operated doors give you the power to monitor and control garage access via a smart phone or tablet. With the ability to link to multiple smart devices at the same time, the B&D Smart Phone app sends a notification if your door is left open, operated or obstructed.

Smart door solutions Smart door solutions Warranty A garage door warranty is crucial. It ensures the door continues to operate and wear the way it should. B&D garage doors and openers are designed, tested and proven to work in unison, which is why we back them with our market-leading 10-year Total Confidence Warranty * to ensure maximum performance and reliability. *Terms and conditions apply.

Garage Door Warranty Garage Door Warranty AUTO LOCK™ Just because a garage door is closed, it doesn't mean it's locked. Designed to avoid thieves forcing an unlocked garage door up and open, the AUTO LOCK™ receives a signal from the remote to instantly lock the garage door with a heavy-duty bolt, all without the need for a key.

AUTO LOCK™ AUTO LOCK™ AUTO LOCK™ Increased Automatic Safety Every B&D automatic garage door has an auto-reverse feature built into the motor to recognise friction or obstruction. Automatic Reverse is designed to prevent the door closing on obstructions such as people and property, while Automatic Backdrive triggers the motor to drive back down if the door is being forced open.

Openers and Remotes Openers and Remotes Openers and Remotes Infrared motion detection In addition to an auto-reverse system, wireless safety beams are essential to protect young children, pets, cars and other valuable items. When an infrared beam, located inches from the base of the garage door, senses an object in the path of the door closing, it will not allow it to shut while the object remains. As soon as the beam is broken, the opener will kick into reverse, minimising risk and injury.

Openers and Remotes Openers and Remotes Openers and Remotes Choosing a garage door style From high-end designer doors to more traditional options, garage doors come in a range of materials, styles, colours and finishes. Garage doors make up around 60% of the home's façade and are as much a focal point as front doors, windows or exterior cladding, so investing in quality products is important.

COLORBOND garage doors can be seamlessly coordinated with your new or existing colour scheme and other steel features around your home, whereas Knotwood – a quality woodgrain finish that boasts the beauty and warmth of textured timber – creates a natural, earthy aesthetic.

Not sure where to start? Let us take the pressure out of the process – we'll work with you to understand your needs, and help you design a custom door that perfectly complements the style of your home. Contact us to speak to a B&D garage door expert about your desired style.
